

SOCIAL IMPACT ASSESSMENT

# SIA

in 10 Questions

URBAN VISION  
PLATFORM

1960-1980

1980-1990

1990-20??

# Preface

Large-scale urban regeneration projects that have been developing within the 3rd regeneration period started causing traumatic effects.

The lack of interaction between the "affecting" and "affected" parties and the lack of a competent act of participation during the process of project development, bring about negative impacts and reactions.

From now on, it is crucial to underline the fact that urban regeneration is not solely a real estate development. Therefore, its social and economical dimensions should come to the fore in order to develop an approach that is responsive to social impact. The impacts should be well defined and thoroughly analyzed via systematic research and mitigation strategies and innovative tools should be proposed.

During the "Ten Projects, Tens of Impacts" Program, volunteers of the Urban Vision Platform assessed the impacts on:

- Project Affected People (PAP) and
- Project Affected Assets (PAA).

Following steps were carried throughout the program;

- Selection of 10 project areas that are going through different project stages and subject to different project development approaches,
- In-depth research on the project processes and present state of affairs,
- Examination of national and international cases of Social Impact Assessment (SIA),
- In-depth interviews with the Project Affected People (PAP), field observations on various impacts and the reactions,
- Evaluation of the impacts on people and places.

The objectives of this program are;

- to bring out a contextually sound approach for a Social Impact Assessment Guide for the urban regeneration projects in Turkey, by taking the current national urban regeneration projects and the international cases into account
- to bring into question SIA approach as an obligatory task for urban regeneration processes.

In order to minimize the negative impacts of large scale urban projects on "life" and "place", and in order to develop cooperation mechanisms between public, private and civil parties, Social Impact Assessment (SIA) reports should be prepared.

The steps of preparing SIA reports should involve;

1. Profiling; Due Diligence
2. Scanning; Early Intervention
3. Analysis; Impact Assessment
4. Planning; Mitigation Management
5. Follow-up; Monitoring and Evaluation

"Social Impact Assessment in 10 Questions" booklet intends to bring the issue to the agenda of various parties, such as politicians, public officers, private sector executives, local initiatives and inhabitants. In addition to that, Social Impact Assessment (SIA) Guidebook, aims to highlight the fact that the urban regeneration projects should not be only considered by their physical interventions but their social and economic dimensions should be taken into account through Social Impact Assessment reports.

**A. Faruk Göksu, Sila Akalp**  
**Urban Vision Platform**

**SOCIAL IMPACT ASSESSMENT**

**SIA**

**in 10 Questions**

**1** What is SIA?

**2** Why should SIA reports be prepared?

**3** What are the **impacts** on "life" and "place"?

**4** What are the **main principles**?

**5** What is the **approach**?

**6** What are the main preparation **steps**?

**7** What is "**Social Interaction Matrix**"?

**8** What is "**Negotiation Management Process**"?

**9** What is "**Social Impact Responsive Design**"?

**10** What are the **components** of a SIA report?

# 1 What is SIA?

Social Impact Assessment (SIA) is an impact evaluation and management process that elaborates on the relationships between the "Affecting" and the "Affected" parties. In order to coordinate the interaction process between the "Affecting" and the "Affected" parties in a more inclusive and responsive way, SIA, especially, attempts to guide decision makers whose decisions have direct impact on "life" and "place". (Göksu, F. 2013).

SIA includes analysis, monitoring and planning studies to understand the positive and negative impacts of the plans, projects, programs and policies of social change and to mitigate the negative impacts. SIA studies aims to contribute for the production of egalitarian and accessible urban spaces that meets individual and social needs. In this respect, SIA can be considered as a practical impact management tool for aiming for a life oriented approach.

# What are the differences between the **SIA** and **EIA**?

Environmental Impact Assessment (EIA) focuses on the large scale infrastructure and construction investments causing change mainly on the bio-physical environment; focusing on themes such as environmental pollution, bio-diversity, natural resources, climate change etc. Social Impact Assessment (SIA), on the other hand, concentrates on the social, economic and environmental issues in a more holistic way, anticipating participatory project design and management processes.

Since 1993, in Turkey, large scale infrastructure projects have been obliged to being subject to the EIA before they were implemented.

# Other definitions for SIA

In general terms, SIA is analyzing, monitoring and managing the social consequences of development. (Vanclay, 2012).

Social impact assessment can be defined as the process of assessing or estimating, in advance, the social consequences that are likely to follow from specific policy actions or project development, particularly in the context of appropriate national, state, or provincial environmental policy legislation. (Burdge, Vanclay, 1996)

Impact assessment is a set of logical steps to be followed when you prepare policy proposals. It is a process that prepares evidence for political decision-makers on the advantages and disadvantages of possible policy options by assessing their potential impacts. (EU, 2009)

Social Impact Assessment includes the processes of analyzing, monitoring and managing the intended and unintended social consequences, both positive and negative, of planned interventions (policies, programs, plans, projects) and any social

change processes invoked by those interventions. (Vanclay, 2003)

Social impact assessment (SIA) is a process for understanding and responding to the social issues associated with development. (Franks, 2012)

Social impact assessments (SIA) are studies and resulting documentation that review the social implications of the planning, design, decision making, management, operation and termination of a proposed activity. (Rio Tinto, 2011)

The purpose of an environmental impact statement (EIS) (consequently of a social impact assessment) is to assess and report on a project's social, economic and environmental impacts and the measures proposed to avoid, manage, mitigate or offset the predicted impacts of the project. Impacts can be either positive (i.e. benefits and opportunities to capitalize on) or negative (i.e. adverse impacts to be managed). (Queensland, 2013)

# Why should SIA reports be prepared?

In order to minimize the negative impacts of urban regeneration projects of the third regeneration period on life and place, and in order to develop negotiation mechanisms, Social Impact Assessment (SIA) reports should be prepared.

In order to assume the minimization of the tensions between parties in urban regeneration projects, SIA reports should be prepared through well-functioning interaction platforms, which may serve as a means for minimizing negative effects, developing empathy, compromising valid expectations of the involved parties from each other. In other words, SIA reports should be brought in the agenda of Turkey in order to minimize the negative impacts on project affected people (PAP) and project affected assets (PAA).

In order to deal with the social dimension of urban regeneration, especially the impacts of current projects on life and place should be examined. For this reason, through "Ten Projects, Tens of Impacts" program performed by Urban Vision Platform, ten project areas are studied to define the perception of communities about urban regeneration and negative and positive impacts of the projects.

"You wouldn't fix the houses, before you fix the mentality."

"I will miss everything."

"Everywhere is urban regeneration project. Where will the people go, in case of an earthquake?!"

"This place is both my village and my city. I can neither go back to the village nor stay here."

"More buildings, more people..."

"I can't imagine myself in a 28 floor building."

"What about tenants' conditions?"

"There is no choice!"

"They say, there will be urban regeneration in 5 years, in this neighborhood too."

"Regeneration, together with people!"

"I was born in here, I grew up here."

"Is it urban regeneration or real estate redevelopment?"

"We thought about what the contractors going to give us, not the other way around."

"When we hear funeral prayer, we hope that he is not from our block."

"Skyscrapers in urban blocks!"

"One is rich, the other one is poor; one is happy, the other one is unhappy."

"Our tenants have gone; it used to be a contribution to the family budget."

"Back to the village project."

"Come come rich!"

"We were waiting, we are waiting, we will be waiting."

## 3 What are the **impacts** on "place" and "life"?

CHANGE OF;  
**FUNCTIONS**

RESIDENTIAL-MIXED

New usages  
Infrastructure  
Construction duration

CHANGE OF;  
**PATTERNS**

NEIGHBORHOOD-GATED COMMUNITY

Development  
Public spaces  
Historical patterns

CHANGE OF;  
**TPOLOGY**

APARTMENT-BLOCK

Housing diversity  
Housing structure  
Housing quality

CHANGE OF;  
**WORKPLACE**

SHOP-SHOPPING CENTER

Shop  
Workshop  
Shopping places

CHANGE OF;  
**SOCIAL PROFILE**  
POPULATION

Social profile  
Change of population  
Increasing displacement  
Situation of tenants

CHANGE OF;  
**RELATIONSHIPS**  
NEIGHBORHOOD-GATED COMMUNITY DWELLER

Neighborhood identity  
Relationship among neighbors  
Solidarity and organizing  
Apartment and street culture

CHANGE OF;  
**EXPECTATIONS**  
PERCEPTIONS-WORRIES

Project process  
Anxiety and isolation  
Perception of security

CHANGE OF;  
**ECONOMY**  
LOSSES-GAINS

Property and shares  
Loss of income due to the dislocation  
Situation of local shopkeepers  
Other economic activities

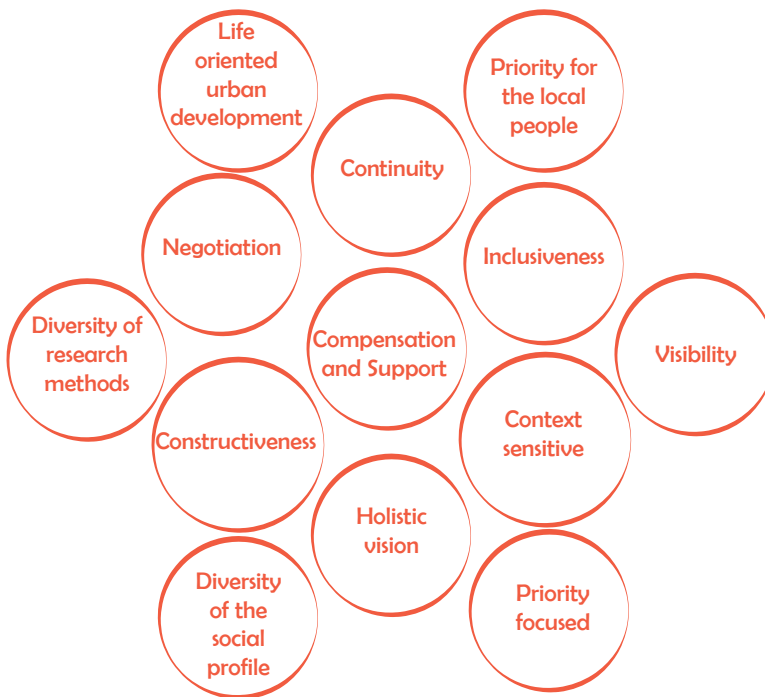

**Life**

Project Affected People (PAP)

# 4

## What are the main principles?

According to the international approaches following principles should be followed in the preparation process of SIA:

World Bank criteria and international experiences show the need to handle the reactions to the negative impacts of current projects in interactive environments where each individual can be part of the solution.

For the preparation of SIA reports, the World Bank's O.P.4.03 and O.P.4.12 code would be taken into account and following criteria should be met:

1. Minimization of (involuntary) resettlement,
2. Income restoration,
3. Compensation of losses,
4. Participation and consultation.

# 5 What is the approach?

In Turkey there is an urgent need for Social Impact Assessment to come to the agenda while also taking the current EIA practices into account.

The approach to prepare SIA reports would be as follows:

## INTERACTION

Providing interaction platforms for affecting and affected groups

## EMPATHY

Providing negotiation platforms to enable understanding of different expectations

## BALANCE

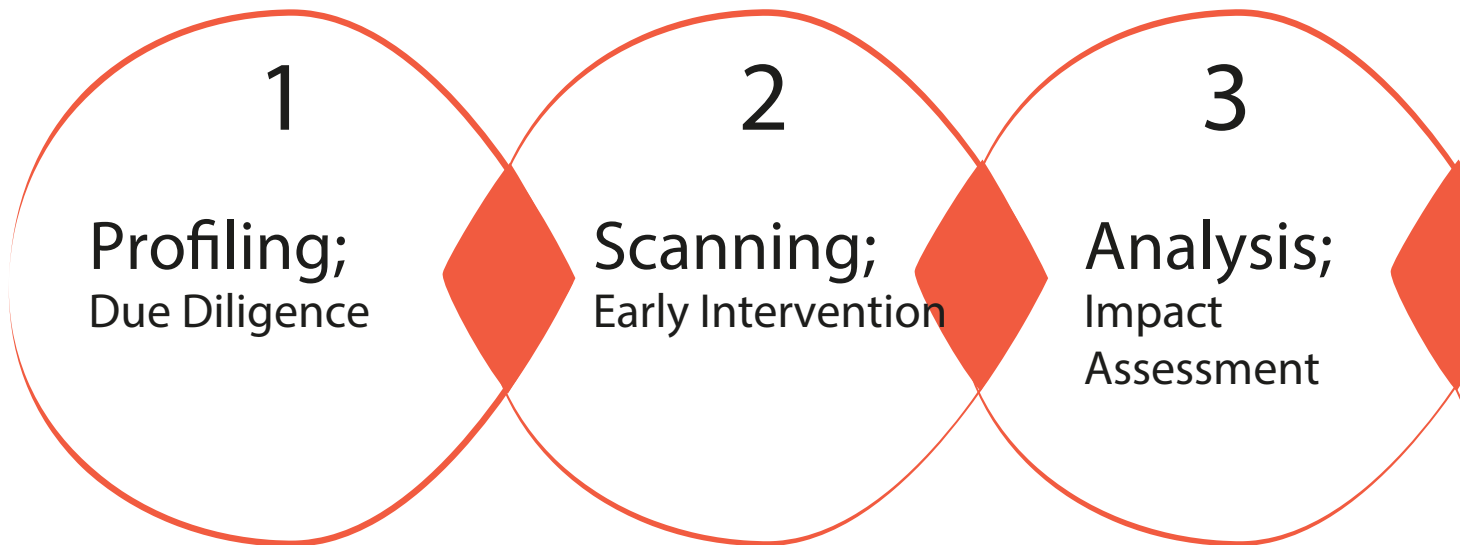

Providing balance between social and individual expectations

# 6

## What are the main preparation steps?

The methodology for preparing a SIA report involves 5 main steps:

1

**Profiling;  
Due Diligence**

- Deciding upon the main objectives of impact assessment process
- Identifying the extent of the research
- Defining and introducing the project;
- Collecting data on the socio-economic indicators of the project area
- Performing a Capacity Analysis on the social and physical features of the project area
- Determining the actors and the groups of the project

2

**Scanning;  
Early Intervention**

- Differentiating immitigable impacts from other impacts
- Detecting the impacts which require precautionary measures
- Identifying the main interventions (Alternatives, Revisions)
- Incubating solution-oriented tools for precautions

3

**Analysis;  
Impact  
Assessment**

- Defining the scope of impacts on life (Project Affected People-PAP) and place (Project Affected Assets-PAA)
- Identifying and evaluating the expectations of different parties
- Assigning the likely impacts and their responses via "Empathy Mapping" technique
- Analyzing the secondary and cumulative effects
- Setting up the project's negotiation provisions

4

## Planning; Mitigation Management

Formulating a Social Impact Management Plan in accordance with the "Social Interaction Matrix"  
Scheduling a program for the impact mitigation which the project is in need of  
Appointing a time-plan for the project implementation  
Operating

5

## Follow-up; Monitoring and Evaluation

Creating a check-list for the follow-up during the project process  
Determining a time-schedule for the evaluation of the project process  
Designating a committee to the identification of losses during the project processes and afterwards  
Preparing a performance check system for impact mitigation through periodical meetings  
Writing reports on the progress of the project  
Revising the programs when necessary

1. Profiling: Defining the physical, social and institutional conditions of the project area.

2. Scanning: Searching for the possibilities of precautionary measures in order to eliminate the negative impacts which are immitigable.

3. Analysis: Evaluating the impacts and the responses.

4. Planning: Designing the process management plan for Impact Mitigation.

5. Follow-up: Monitoring and evaluating the impacts and the project processes.

# What is "Social Interaction Matrix"?

Social Interaction Matrix searches for the answers to the question of "by whom and how the process should be handled?" within the interaction platform of project affected parties and offers alternative solutions to the problems. The aim is to develop common strategies, actions, program and projects in order to minimize negative social and economic impacts.

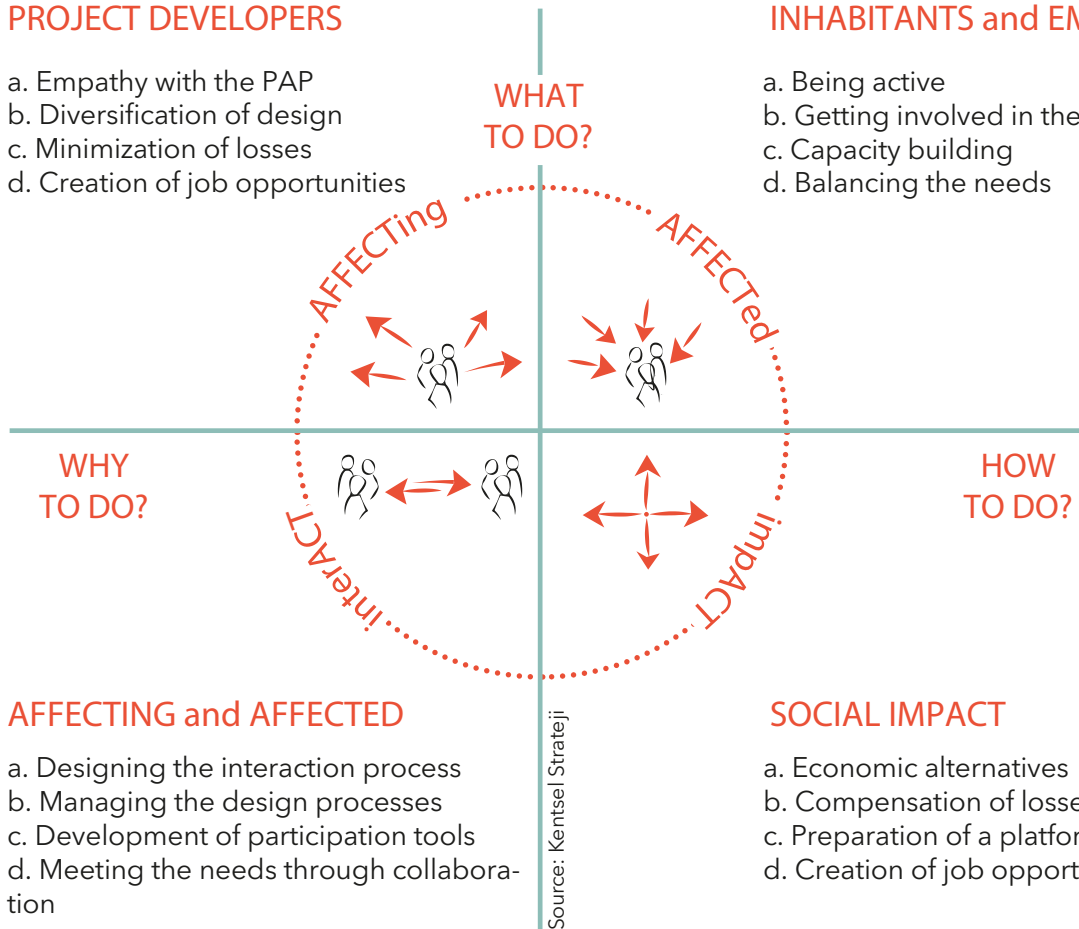

# Social Interaction Matrix

## PROJECT DEVELOPERS

- a. Empathy with the PAP
- b. Diversification of design
- c. Minimization of losses
- d. Creation of job opportunities

## INHABITANTS and EMPLOYEES

- a. Being active
- b. Getting involved in the design process
- c. Capacity building
- d. Balancing the needs

## AFFECTING and AFFECTED

- a. Designing the interaction process
- b. Managing the design processes
- c. Development of participation tools
- d. Meeting the needs through collaboration

## SOCIAL IMPACT

- a. Economic alternatives
- b. Compensation of losses
- c. Preparation of a platform for participation
- d. Creation of job opportunities

Source: Kentse | Strategie

## **AFFECTing;** Sharing the Power PROJECT DEVELOPERS (Public-Private)

### Empathy with the PAP

- Prepare social and economic inventory
- Prepare social integration projects
- Propose project development alternatives
- Prepare empathy platforms

### Diversification of design

- Define social design principles
- Research innovative methodologies
- Strategic design charrette
- Prepare design guideline

### Minimization of losses

- Determine possible losses
- Examine the precautions for minimum relocation
- Prepare pre-feasibility study
- Determine the resources

### Creation of job opportunities

- Propose mixed-use alternatives
- Define job potential
- Prepare regional information systems
- Priority job creation program for inhabitants

## **AFFECTed;** Local Power INHABITANTS and EMPLOYEES

### Being active

- Form neighborhood organizations
- Demand information
- Develop communication possibilities
- Set Project Monitoring Committee

### Getting involved in the design

- Define demands
- Balance expectations
- Set the boundaries for development and conservation
- Work with the community designer

### Capacity building

- Activate social capital
- Get professional support
- Demand capacity building programs
- Choose local leaders

### Balancing the needs

- Define individual and social needs
- Define uncertainties and priorities
- Search for the resources
- Prepare Common Needs Program

## **InterACT;** Affecting and Affected

### Designing the interaction process

- Define the responsibilities of the parties
- Set a budget
- Set Project Coordination Committee
- Prepare interaction plan

### Managing the design processes

- Define the spatial integration strategies
- Develop disaster-risk oriented design approach
- Define public uses
- Set Design Monitoring Committee

### Development of participation tools

- Establish information offices
- Prepare information documents
- Set e-communication infrastructure
- Develop capacity building programs

### Meeting the needs through collaboration

- Define common needs
- Prioritize public investments
- Encourage social entrepreneurship
- Establish living labs

## **ImpACT;** Managing Power Social Impact

### Economic alternatives

- Transfer of development rights
- Affordable housing program
- Relocation program
- Tenant protection program

### Compensation of losses

- Loss Ascertainment and Monitoring Committee
- Loss Ascertainment
- Social aid funds
- Resource development

### Preparation of a platform for participation

- Project Decision Committee
- Social Impact Responsive Design
- Social Projects Committee
- Request and complaint mechanism

### Creation of job opportunities

- Income improvement plan
- Added-value programs
- Job switches program
- Training programs

# What is "Negotiation Management Process"?

Within the interaction platform; negotiation management process that includes informing, awareness-raising, engagement, expectation, ambiguity and adoption steps will offer important opportunities for the minimization of negative impacts.

The Negotiation Management Process is comprised of six steps for negotiation:

1. Honest and transparent informing,
2. Awareness-raising considering project details and legal rights,
3. Meetings between parties affected from the project,
4. Expectation management of interested parties,
5. Removal of uncertainties by determination of problems and opportunities,
6. Adoption of the project and SIA report by interested parties.

# Negotiation Management Steps

# What is "Social Impact Responsive Design"?

In order to minimize design related social impacts, human centered design approach processes must be managed by broad participation of affecting people.

'Social Impact Responsive Design' Process must consider local dynamics and differences, design principles and projects should be prepared, considering the current needs and future expectations of affected people.

Social Impact Assessment and Management processes should include bottom-up approach for the neighborhood design. From that perspective, "Social Impact Responsive Design" contains 4 main parts:

1. **Understand:** Inhabitants and the Neighborhood
2. **Perceive:** Dynamics of Life and Place
3. **Empathy:** Inhabitants
4. **Sharing:** among all the Actors

01

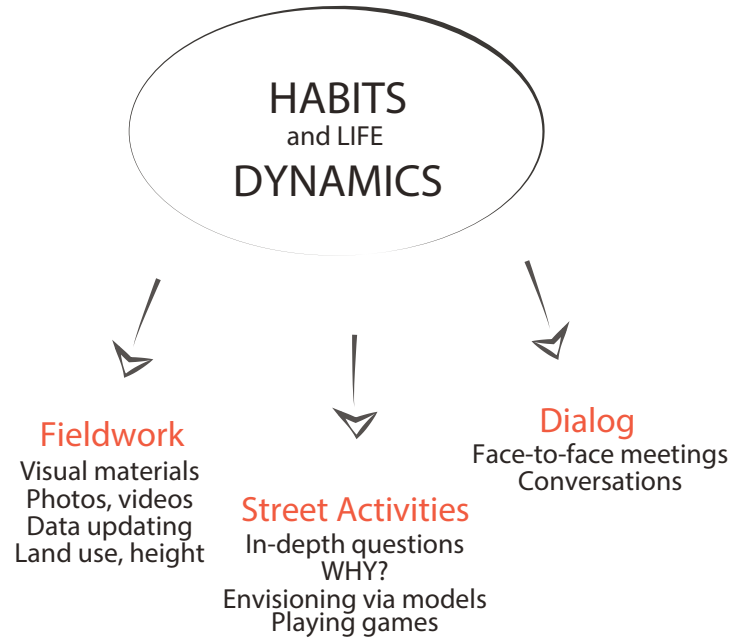

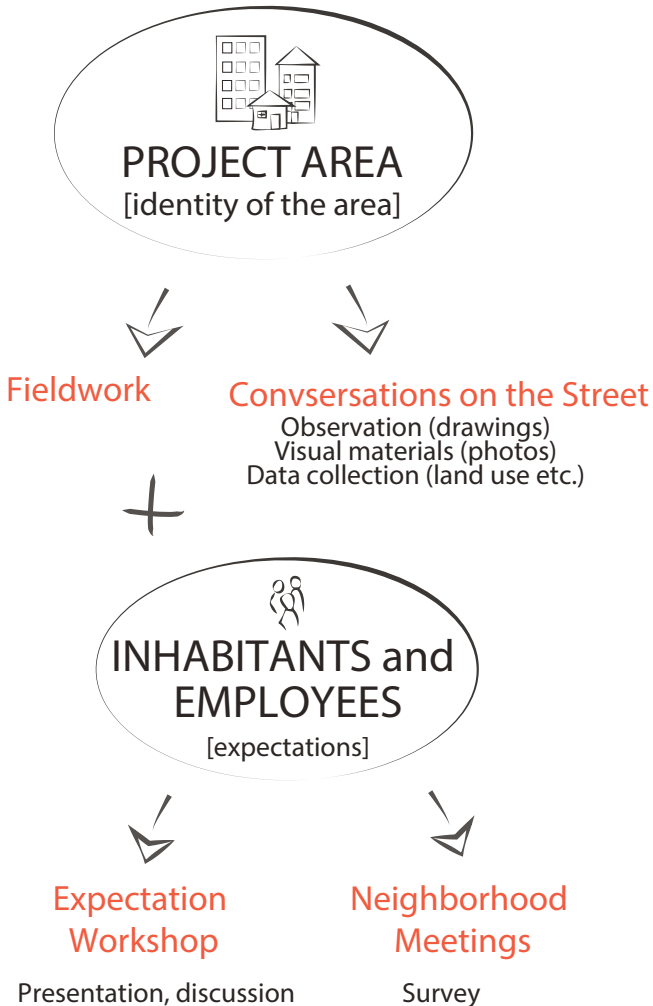

# Understand

the Inhabitants and the Neighborhood

02

# Perceive

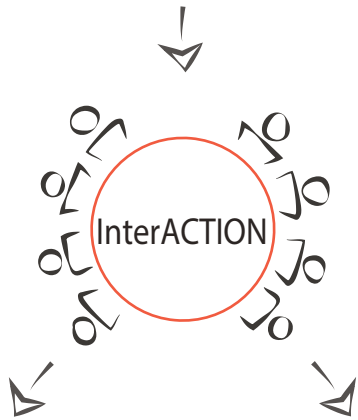

the Dynamics of Life and Place

# 03 Empathy

with the Inhabitants

Testing the design principles,  
**SOLUTION**  
oriented thinking,  
developing empathy

Design Principles      Design Solutions

# 04 Share

among all the Actors

Recommendations for  
Design Solutions  
Handbooks, informing, models

Feedback

Meetings  
Social media  
Press

# 10

# What are the components of a SIA report?

## 1 Profiling; Transformation Area

- 1.1. Project Background
  - 1.1.1. Legal processes: Restrictions and Definers
- 1.2. Neighborhood Background
  - 1.2.1. Social and Spatial Analysis Map
  - 1.2.2. Problems and Opportunities
- 1.3. Yesterday/Today/Tomorrow Matrix
- 1.4. Capacity Analysis
- 1.5. Interaction Plan

## 2 Scanning; The Alternatives

- 2.1. Impacts to be mitigated
- 2.2. Immitigable impacts
- 2.3. Alternative approaches

## 3 Analysis; Impact

- 3.1. Expectation Matrix
- 3.2. Negotiation Steps
- 3.3. Potential Impacts of the Project
  - 3.3.1. Project Affected People – Life
  - 3.3.2. Project Affected Assets – Place
  - 3.3.3. Secondary and Cumulative Impacts
- 3.4. Common Needs Program

## 4 Planning; SIA Process Management Plan

- 4.1. Social Interaction Matrix
- 4.2. Social Impact Responsive Design
- 4.3. Action Plan
  - 4.3.1. Proposals for Minimal Relocation
  - 4.3.2. Mediums of Income Improvement and Job Creation
  - 4.3.3. Options for Participation and Organization
  - 4.3.4. Loss Mitigation Mechanisms

## 5 Follow-up; Monitoring and Evaluation

- 5.1. Performance Criteria for Monitoring
- 5.2. Process Evaluation Timetable of the Project
- 5.3. Composition of the Monitoring Committee
